# Preface

*VeriCon*

Dear students,

Welcome to the 25th edition of the Bouwkunde Bedrijvendagen.

This event is a great opportunity for you as a student to delve into the versatile world of construction engineering. Whether you are at the beginning of your studies or already thinking about your first steps into the working field, the Bouwkunde Bedrijvendagen offer a wide range of opportunities to discover, inspire and connect.

Therefore, take advantage of this opportunity and ask anything you want to know about working in this industry. Whether it's about the company culture, projects or career opportunities, don't be afraid to ask questions. But also be sure to tell about your own passions and ambitions, what excites you? You will find that companies appreciate an open and curious attitude, and are also interested to hear your story.

For more than 10 years, VeriCon has been a regular participant, and for a good reason. Because this is the event where we meet our future colleagues: you! Events like this encourage cooperation and innovation, two core values that we consider very important. In addition, construction is full of challenges, and we love them. Whether it's the evolution from craft to technology, cost savings or difficult sustainability questions, we don't shy away from a challenge. We hope you aren't as well. Are you curious about what else we stand for? We will gladly tell you all about it at our booth, where we can also chat about everything that is going on in the world of construction right now. Join us and build your future!

Then all that remains is to wish you all lots of fun and luck, hopefully this edition will be as great as the past ones!

Kind regards,  
VeriCon

# Committee of Recommendation

2025-2026

The initiative of the Bouwkunde Bedrijvendagen is supported by the following people:

Prof.  
**Silvia Lenaerts**  
Rector Magnificus  
TU Eindhoven

Prof. Dr. Ir.  
**Theo Salet**  
Dean Faculty of the  
Built Environment  
TU Eindhoven

Ir.  
**Jan van der  
Meulen**  
Director of Education  
Faculty of the Built  
Environment  
TU Eindhoven

Prof. Dr. Ir.  
**Tim van der Hagen**  
Chairman of the  
Executive Board and  
Rector Magnificus of  
TU Delft

Prof. Dr. Ir.  
**Jos Brouwers**  
Full Professor and  
Chair of Building  
Materials

Prof. Dr. Ir.  
**Bauke de Vries**  
Professor USRE  
TU Eindhoven

Prof. Ir.  
**Juliette Bekkering**  
Full Professor and  
Chair of Architectural  
Design and  
Engineering

Prof. Ir.  
**Bert Snijder**  
Full professor and  
Chair of Structural  
Design

Prof. Ir.  
**Dick van Gameren**  
Dean Faculty of the  
Built Environment  
TU Delft

**Pascal van der  
Molen**  
Director  
KIVI

Drs.  
**Arno Visser**  
Chairman  
Bouwend Nederland

**Karin Oomen**  
Advisor Education &  
Job Market  
Bouwend Nederland

Prof. Dr. Ir. A.  
**Tom Veldkamp**  
Rector Magnificus  
University of Twente

# Preface

## *24th Board*

Dear participant of the Bouwkunde Bedrijvendagen,

Welcome to the 25th edition of the Bouwkunde Bedrijvendagen!

For over two decades, BBD has supported students in exploring their future by connecting them with companies and professionals from a wide range of disciplines. As the 24th Board, we are proud to organize this anniversary edition and invite you to start shaping Your Blueprint for Tomorrow.

The built environment is constantly evolving, influenced by technological innovation, sustainability challenges, and changing societal needs. As a student, these developments present countless opportunities, but also important choices. This year's Bouwkunde Bedrijvendagen are designed to support students at every stage of their academic journey, from orientation to specialization, by offering insight into the industry and direct contact with professionals.

The BBD program is spread over two weeks, offering a diverse range of activities focused on learning, interaction, and connection. The first week begins with a Kick-Off Lecture, setting the stage for the event and introducing the themes of this year's edition. This is followed by the highlight of the Bouwkunde Bedrijvendagen: the expanded 2-Day Career Market, complemented by 1-on-1 Interviews. By extending the Career Market to two days, students are given more time and flexibility to explore 67 different companies, engage in meaningful conversations, and build lasting professional connections.

The second week focuses on deepening knowledge and interaction through a combination of Workshops, a Lunch Lecture, and a Discussion, offering students the opportunity to actively engage with companies and current topics. The program concludes with a Company Dinner, providing an informal setting for students and companies to connect and reflect on the BBD Weeks.

With our slogan "Your Blueprint for Tomorrow" we encourage you to actively think about the future you want to create. Whether you are exploring options or preparing for your next step, we hope this edition inspires you to turn ideas into opportunities.

We look forward to welcoming you to the Bouwkunde Bedrijvendagen this October and March.

The 24th Board of the Bouwkunde Bedrijvendagen.

# Board 2025-2026

24th Board - 25th Edition

Prevention Training

18:00 - 21:30  
**Company Dinner** at  
**FifthNRE**

## Kick-Off Lecture By Benthem Crouwel Architects

12:40-13:20 @Trappenzaal

The Bouwkunde Bedrijvendagen officially kicks off on March 18th with an inspiring lecture to set the tone for the week. The event will begin with a brief opening speech by Robert van Dongen, who will highlight the importance of connecting education with the professional world.

Following the opening, Joost Vos, a partner at Benthem Crouwel Architects, will present. He will discuss how people interact with buildings and how spatial flow shapes the user experience.

He will also highlight LAB42 at the University of Amsterdam — a sustainable, modular, and energy-neutral building designed for AI and digital innovation. With its flexible steel structure, solar panels, and collaborative open spaces, LAB42 is built to adapt to future needs while encouraging interaction and interdisciplinary exchange.

## 1-on-1 Interviews

9:00-12:00 @Vertigo

During the 1-on-1 interviews, you will get the chance to have a more formal, private talk with the representatives of a company of your interest. Every interview will last 15 minutes in which you can present yourself and ask all the questions you want to ask the companies. It could possibly be your first contact moment with your future employer!

The following companies will be present at the 1-on-1 interviews:

- Vericon
- Republiq
- VKZ BV
- RYSE
- ABT b.v.
- ICSadviseurs
- Sonneborgh
- Nepocon
- Draaijer
- Goudstikker - de Vries B.V.
- Kragten
- moBius consult bv
- OPPS
- RoosRos Architecten
- SVP
- Sweco
- Witteveen+Bos
- WSP
- 

Your **CV is required** as companies select students based on CV uploads. The subscription for this closes on the 23rd of February.

## Career Market

12:30-16:00 @Plaza, Vertigo

The most renowned event of the Bouwkunde Bedrijvendagen, the Career Market, takes place on the 11th and 12th of March.

During this market, a diverse selection of companies are present at the Plaza, in Vertigo, to give a depiction of the possibilities in the Built Environment sector. After the market opens, you can walk around and talk to all different types of interesting companies. The companies are not the only ones present, all the study associations are there to inform you about the companies that fit their discipline.

If you are unsure where to begin, consider joining a guided tour led by one of the study associations.

After the market closes at 16:00, everybody is more than welcome to join the companies for some drinks at Plaza, powered by SkyBar!Underground.

At the Career Market, getting in contact with your future employer has never been so easy! Use the new BBD app to see where the company that you are interested in is located and use your unique QR-code to exchange information with companies!

**New this year: The Career Corner**, a brand-new addition to the Career Market, designed to support you beyond just networking. This is your go-to spot to update your LinkedIn photo, explore vacancies and internships, connect with student teams, or simply take a moment to recharge between company visits.

## Lunch Lecture by KCAP

12:40-13:20 @Trappenzaal

On March 17th, the second lecture of the Bouwkunde Bedrijvendagen is delivered by Frank Werner from KCAP

He will discuss the ongoing renovation and redevelopment of Eindhoven Centraal — a place we all know well and where transformation is unfolding right before our eyes.

As part of the KnoopXL masterplan, the station area is being redeveloped into a vibrant, mixed-use district with new housing, offices, greener public spaces, and improved connections for pedestrians, cyclists, and public transport. The goal is to turn the station from a purely functional transit hub into a lively and well-connected urban centre.

## Workshop Contract & Salary Negotiations

10:00-12:00 @Zwarte Doos

In this practical workshop, given by **TU/e Career Academy**, you'll learn how to confidently navigate your first job offer and make informed decisions.

Congratulations, you've found a job! Your employer has invited you for a meeting to discuss the job offer. What are the ins and outs of such a conversation? Do you immediately agree to the offer you receive? Does your contract include a notice period or competition clause? What does the pension scheme look like? And is your salary offer around the market rate? These are all questions that will be addressed during this workshop. You will obtain a better overview of all aspects of your labor contract in the Netherlands while improving your negotiation skills.

## Workshop Burnout Prevention Training

9:00-12:30 @Zwarte Doos

From Study Pressure to Life Energy is a practical and inspiring half-day training for students and young professionals who want to deal better with pressure, stress and high expectations.

Study pressure and workload are among the biggest challenges for students today. Many expect a lot from themselves, while trying to balance study, work and personal life. In this training, participants learn how to recognise stress signals early, use their energy more wisely and stay resilient during their studies and first work experiences.

The training takes place from 9:00 to 12:30, in English, with a maximum of 20 participants. It is guided by two experienced trainers, ensuring personal attention, interaction and strong learning outcomes.

Participants work on their personal resilience, learning how stress and recovery work in daily life. They gain insight into their own energy sources and stressors and learn how to recover better, both mentally and physically. A key outcome is a personal action plan with practical tools that can be applied immediately in study and work situations.

This training helps participants increase self-awareness, manage pressure in a healthy way and maintain enjoyment in life and study. It supports sustainable behaviour, stronger resilience and long-term employability.

An ideal investment in wellbeing, vitality and future success.

## Discussion: 'Data Dilemmas in Smart Cities'

19:30-21:00 @Blauwe Zaal, Auditorium

Smart cities promise a future of smooth, efficient services and infrastructure, a safe society and a more sustainable urban life. By using the data generated by residents and users to power everything from transport to energy, these technologies could help solve some of the biggest challenges of city living.

But behind these seemingly progressive smart technologies are profound ethical dilemmas and many unknowns. It is becoming increasingly difficult to walk the streets of any Dutch city without being monitored, tracked and sometimes even nudged. Those living in smart cities risk experiencing increased inequality and unwanted exposure. How do we balance the convenience of a connected city with the basic right to privacy? And can laws and regulations keep up with the rapid development of AI and smart technologies?

In this interactive session, we bring together experts in smart cities, law, ethics, and data collection to explore what this future could really mean. Together, we will uncover how these changes affect our daily lives and what we should demand from the cities of tomorrow. Are we comfortable with the amount of data that the future city will require from us?

The discussion about 'Data Dilemmas in Smart Cities' takes place in the Blauwe Zaal of Auditorium.

The discussion will be led by a three-member panel of experts from diverse backgrounds. The evening will be moderated by Jan Willem Wesselink, known from NPO Radio 1. A Studium Generale point is administered to anyone participating in the activity. If you need this point, subscribe through [studiumgenerale-eindhoven.nl](http://studiumgenerale-eindhoven.nl)

## Company Dinner

18:00-21:30 @FifthNRE

During the Company Dinner, you get the chance to talk to companies in an informal atmosphere. The Company Dinner consists of three courses with some drinks at the end to close the night. During the courses you talk to the representatives of a company at the table assigned to you, after each course you switch to another table. After the last course you have an opportunity to talk to any of the attending companies with a drink. Every year the Company Dinner is held at a different location, this year it is held in restaurant FifthNRE.

The participating companies are:

- VeriCon
- Republiq
- Pieters
- SKS Group B.V.
- VKZ BV
- Atriensis
- RYSE
- OchtendMensen
- ABT b.v.
- B-invented B.V.
- Cauberg Huygen
- Count&Cooper
- HEVO
- Laride
- Stevens Van Dijck

The subscription for the Company Dinner closes on the 6th of March.

# Company Classification

Many companies in the built environment are multifaceted, operating in multiple fields, which can make their exact focus difficult to determine. To simplify this, the TU/e has developed a classification system based on the educational directions offered at the university. This classification is applied to all participating companies at the Bouwkunde Bedrijvendagen, helping you more easily identify your preferred directions and companies during the events. The TU/e provides multiple focus areas within the built environment, which are explained in detail on these pages. Companies have also been categorized according to these classifications, as outlined above.

AUDE

**Architectural & Urban Design Engineering:** this ABP track stands at the cradle of inventive design solutions for concrete spatial issues, emphasizing the possibilities of the program, and ensuring a high quality of context. The track offers two specialisations: architecture and urbanism. The architecture specialisation within this track focuses on designing buildings, whereas the urbanism specialisation focusses on the bigger scale of urban planning.

USRE

**Urban Systems & Real Estate:** this ABP track focuses on the functioning and research in the field of real estate management, urban planning, (re)development and management of cities and developing systems to support designers and decision makers.

BPS

**Building Physics & Services:** this ABP track focuses on providing sustainable and comfortable indoor and outdoor environment with attention to physical aspects and processes such as heat and moisture transfer in building constructions, indoor air quality, lighting, acoustics, heating, ventilation, air-conditioning and materials.

SED

**Structural Engineering & Design:** this ABP track contains innovative constructive design, material research and applied mechanics, with core focus on knowledge and application of different structural materials as well as on several methods to solve mechanical problems.

CME

**Construction Management & Engineering:** this master program focuses on process and project management, collaborative design and legal structures, with its focus point on information systems in smart cities and smart buildings.

SUMT

**Sustainable Urban Mobility Transitions:** this is one of the new ABP master tracks at the edge of the build environment scope, where students implement a holistic approach in facing different issues traditionally faced by architects and urban planners, civil and transport engineers, and political scientists.

SMDSA

**Smart Mobility Data Science and Analytics:** Nowadays, data is extracted from all aspects of our lives. We leave data trails in every day-to-day activity, including travelling. At SMDSA one learns to manage large mobility data files, critically understand their quality and use them to address our cities' most pressing challenges.

BT/CT

**Building Design & Technology (BT)\*:** emphasizes on the relation between the design of the building and its technical elaboration.

**Construction Technology (CT)\*:** emphasizes on independent designing and developing a production process for the construction of a building by using materials, equipment and labor in the most optimal way.

\*These are no longer separate master tracks, but are achievable as certificate programs in addition to any of the master tracks and offer the possibility to broaden your education.

## Orientation

On the next pages, a list of companies that are participating in the events of Bouwkunde Bedrijvendagen is provided. All companies are classified based on this colour-coded classification to the master tracks they match the best with. Note that some companies are involved in multiple work fields and therefore have multiple matches.

If you're interested in a company and would like to read more about the work in its active branch, orienting for career options or just want to know in which events they participate, look up the corresponding page number of their dedicated company pages in the list of participating companies and read more about it.

On the bottom right of the company pages, an indication is given using orange activity symbols for every company, stating in which events they participate during the Bouwkunde Bedrijvendagen.

As part of the MyFuture collective, MFA can be earned by participating in the events organised as part of the Bouwkunde Bedrijvendagen.

We are an independent engineering firm, creating the best technical designs for buildings and infrastructure. When realizing designs for new construction and redevelopment projects, we will find solutions to societal challenges with an integrated view. We are known for achieving sustainable built environments in line with the Paris-proof 2050 ambitions.

Challenges abound... but how do you turn an idea or dream into a built reality? Our engineers help build the ambitions of our clients. That requires vision and design power. Since 1953, our passion for technology has led to many innovative and thought-out solutions. For architects, developers, municipalities and contractors.

It is precisely in projects with very high ambitions for impact, sustainability and quality that we make the difference. We have everything in place. The technical skills, innovative drive and process knowledge. As we are part of the Oosterhoff network, we have direct access to complementary expertise. This enables us to realise complex, unique assignments successfully and be ambitious together with clients and partners.

linkedin.com/company/adviesbureau-tielemans-bv/

Since its foundation in 1958 Adviesbureau Tielemans has become one of the largest and most leading structural consultants in this region. Based in Eindhoven, our engineers work with reputable national and international architects on innovating and eye-catching projects both in the Netherlands and abroad. Come see us at our stand and learn what our office has to offer you as a talented engineer!

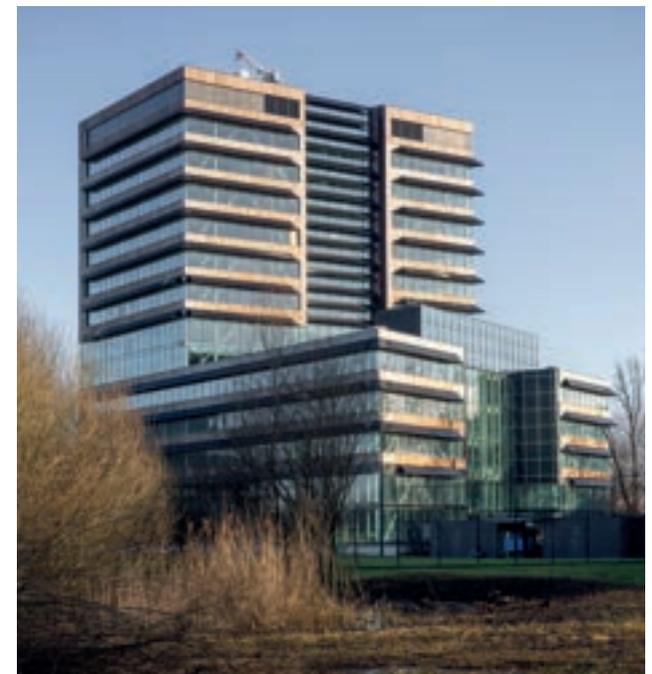

Working at Adviesbureau Tielemans in a design team you aim for the highest achievable combination of shape, structural efficiency and function. This also means following the technological developments in our field so that they can directly contribute to the desired result in practice. Depending on your own skills, you will have the opportunity and support to grow into a project manager function in a short period of time. Within every project we are facing the challenge to elaborate any architectural concept to a suitable structural design.

This resulted in the recently awarded prizes: “Domus Dela” BNA Building of the year public award 2020 and Dirk Rooseburg public award 2021; Haasje Over (top photo) won residential building of the year by Architectenweb; Onyx won Holland Hoogbouw Award 2019.

Adviesbureau Tielemans is situated nearby Eindhoven University of Technology. Hence, knowledge and structural design are close together. This means there is a high probability that, as a student of the University, you have seen projects in Eindhoven of which Adviesbureau Tielemans has designed the main bearing structure. For example, some highrise on Strijp-S: Blok 59, NEXT, The Lux Tower, Trudotoren and Haasje Over, but also de Bakermat, Onyx, The Student Hotel and renovation of the Stadhuistoren, Philips Bedrijfschool and TD-gebouw. Some other recent projects around the Netherlands include Nehmo Trespa (bottom photo), Aan de Kei, Bellavista, fire station Waalwijk, police station Bergen op Zoom and the Willemspoort.

If you are interested, come and meet our engineers at the Adviesbureau Tielemans stand!

## Working at APPM

APPM is a consultancy and project management agency working on improving our physical environment. Together with 100 colleagues, we work on sustainable and smart mobility, the energy and heat transition, sustainable transport, area development, climate adaptation and infrastructure projects.

We work on projects ranging from strategy and policy development to civil engineering projects in all phases, from tendering to implementation. From drawing up an improvement plan for the Eindhoven Ring Road to contributing to a new design for Eindhoven Central Station. And from devising a plan to make organisations in the Genneperparken more sustainable to drawing up a development strategy for a new neighbourhood in Veldhoven.

APPM is a close-knit network organisation that connects expertise from different disciplines. We are resourceful and open to new approaches. Our goal is to contribute every day to make the Netherlands a more beautiful place. We do this from our offices in Rotterdam, Hoofddorp, Eindhoven and Zwolle.

## Enjoying your work

That is always our priority. You decide how, where and on which topics you

work. Freedom, responsibility and trust have been part of our DNA for more than 25 years. In addition to the enjoyment we get from our work, there are the legendary annual Koersdagen (Course Days) with the entire company and regular development days, during which we share inspiration and knowledge at special locations. There is something for everyone in the form of drinks parties, sports activities (skiing trips, cycling, tennis, football, running...), an annual partner event such as a gala and much more.

## Graduating at APPM

We are open to new ideas and vision. That is why we regularly have room for students who are working on their thesis. This way, you can learn from us and we can learn from you. More information about this can be found at <https://www.appm.nl/vacature/afstudereren-bij-appm>.

## Working at APPM

We are also constantly looking for both new and experienced talent.

Aronsohn is a consultant in the field of designing and engineering building structures and project- and construction management. Founded in Rotterdam in 1927, we have since then obtained extensive knowledge and experience with regard to designing, detailing and the supervision of the execution of structures and foundations. Our field of work consist of all building types like office and residential buildings, shopping centres, hospitals and care centres, laboratories, buildings for cultural and recreational purposes, for educational purposes, parking garages, and industrial buildings. We also provide project management and construction management services for new building projects, renovations and transformations.

The firm employs 45 staff in our Rotterdam and Eindhoven offices. Our projects are like the grading of aggregates in good concrete: small projects fill the voids between large and sometimes very large projects. This results in a solid base for a stable and strong organisation.

Arup is a global collective of designers, engineers and technical experts. We use imagination, technology and rigour to shape a more sustainable world. Since 1946, Arup has paired design and engineering ambition with social purpose. Today, we harness our deep technical expertise, partnering with our clients to build a better future for all. Contributing to sustainable development lies at the heart of our approach to business. Our efforts to ensure that our business is environmentally responsible and as sustainable as possible began many years ago, and these efforts continue and intensify. Our strategic corporate commitments include our global decarbonisation strategy, designed to ensure we achieve net zero by 2030. Our experts, plan, design and engineer solutions that deliver multiple benefits. We look for opportunities to strengthen communities, build resilience and advance climate action through our work for clients.

# atriensis

Atriensis is a young and dynamic consultancy firm that supports social housing associations in addressing today's major challenges in energy transition, sustainability, and future-proof housing. With a strong focus on impact, we help create affordable, energy efficient homes and livable neighborhoods across the Netherlands.

Our advisory services focus on:

- Developing energy and sustainability strategies
- Managing renovation and transformation projects
- Collecting, analyzing, and validating real estate data
- Designing programs that stimulate and motivate conscious resident behavior
- Advising on the implementation of innovative and sustainable energy technologies

Atriensis has a flat organizational structure and continues to grow rapidly. This growth creates many opportunities for starters and young professionals with a back-ground in architecture, engineering, or sustainability who want to contribute to meaningful societal impact. We are driven by a deep commitment to sustainability and a strong sense of social responsibility. Atriensis operates throughout the Netherlands, with offices in Eindhoven,

Zwolle, and Amstelveen. Founded in 2006, Atriensis proudly celebrates its 20th anniversary this year. Over the past two decades, we have grown into a trusted partner for social housing associations, combining expertise, innovation, and data-driven insights to accelerate sustainable change.

Today, the Atriensis organization consists of four specialized entities, each contributing to sustainable growth and impact:

- Atriensis Wonen – focused on sustainable and high-quality housing
- Atriensis Data – specializing in collecting and managing reliable real estate data
- Atriensis Wijken – working on sustainable and livable neighborhoods
- Atriensis Bedrijfsvoering – supporting the organization through strong and efficient business operations

Employees of Atriensis share a common mindset and values:

- Social responsibility
- Customer-oriented approach
- Integrity and reliability
- A proactive and professional attitude

Atriensis is a fun, informal, and ambitious organization with a young and energetic team. We believe that sustainable impact starts with people.

That's why we focus on motivating and inspiring our employees, building long-term working relationships, and ensuring a healthy work-life balance.

We offer:

- A daily free and shared lunch
- Flexible working hours and the option to work from home
- A customized internal training program with approximately 70 in-company courses
- Excellent employment conditions and extensive opportunities for personal and professional growth

Interested in an internship, graduation project, or your first job? Atriensis offers many opportunities for interns, starters, and young professionals who want to make a real difference.

bbn adviseurs is an independent consultant company in real estate and land development. We work on many different types of real estate projects. We support our clients with real estate initiatives, urban (re)development, housing issues and construction initiatives. Different types of projects also provide different clients, like public institutions, governments, commercial clients and so on.

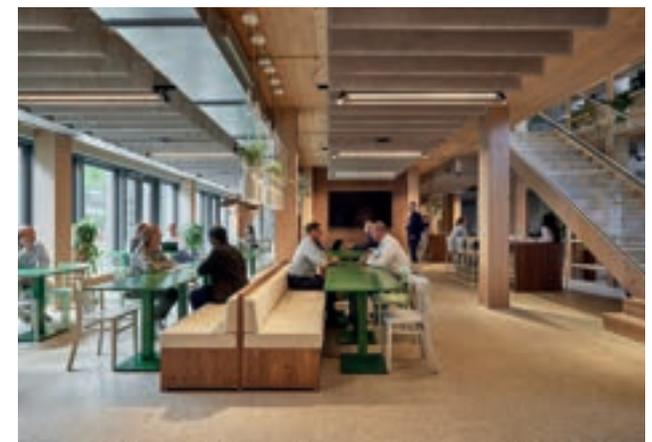

Sustainability is essential in our company, in which renewable energy, circularity and livability are our three primary objectives. "At bbn we want to make the world a bit cleaner" and together with our clients we contribute to the Sustainable Development Goals (SDGs) of the United Nation. This year we opened our CO2-neutral office in Houten. With its circular and biobased materials it fits our mission, and it is a comfortable place to work together.

Our expertise is widely acknowledged. Among others, we employ project managers, planning economists, construction cost managers, real estate managers, data analysts and sustainability specialists. Combining this expertise in multidisciplinary teams, we take on challenging and exciting assignments with an integral approach. An integral approach entails a combination of the perspectives

from all of the different disciplines and an open dialogue to achieve the best and most fitting result for the client. The strength of bbn is our unique broadness of our services. We have knowledge in every market domain. With all disciplines "in house" we bring added value to our clients in every building lifecycle.

We frequently organize project visits, masterclasses and social events with young bbn. We are always open for talent to strengthen our teams. With our different offices at Houten, Amsterdam and Rotterdam there is always a place that would suit you. bbn will give you all the freedom you require to fully develop your potential and fulfill your ambitions. We offer the opportunity to explore your passion, to specialize and grow on a personal and professional level.

BESIX Nederland is a multidisciplinary construction company with a decades-long track record of innovative and trend-setting projects. Our experience and expertise give us the courage to think bigger.

As an enterprising construction partner, we build effective teams with the strongest players, both large and small. This allows us to offer a comprehensive approach to every challenge and respond to the rapidly growing dynamics in the market. By understanding the client's motivations and adopting a collaborative and solution-oriented approach, we create value that transcends construction: before, during, and after the construction phase. Our people play a vital role in our organization. We believe that without them, without teamwork and without collaboration with our clients, we could not be the successful company we are today.

BESIX Nederland has a strong reputation for complex projects. We owe these successes to the innovative way in which we integrate engineering and construction into our processes.

linkedin.com/company/b-invented-b.v.

## B-group

B-invented Building a better future together is possible if you don't see construction as a series of traditional actions, but as a process that can be optimized continuously. We do that by manufacturable designing and engineering. We look at the process and match our ideas with those of our clients and subcontractors. That way we can guarantee in advance that people, methods and resources fit together perfectly. The result is a construction process that runs smarter, more efficiently and carefree. We currently do this with our 5 companies:

- B-too B.V.
- B-invented B.V.
- B-smart fundering B.V.
- B-leaf systeembouw B.V.
- B-happy realisatie B.V.

We create, construct and realize buildings today with the solutions of tomorrow. B-invented is our engineering firm for architectural- and structural engineering. Our approach is one that should suit you because we do it differently than other engineering firms. Our goal is to optimize the process of a total construction project. An optimal process gives maximum results and that's why we are driven construction improvers.

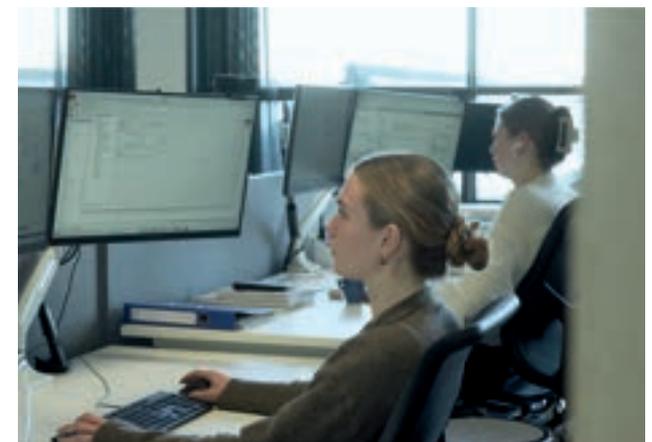

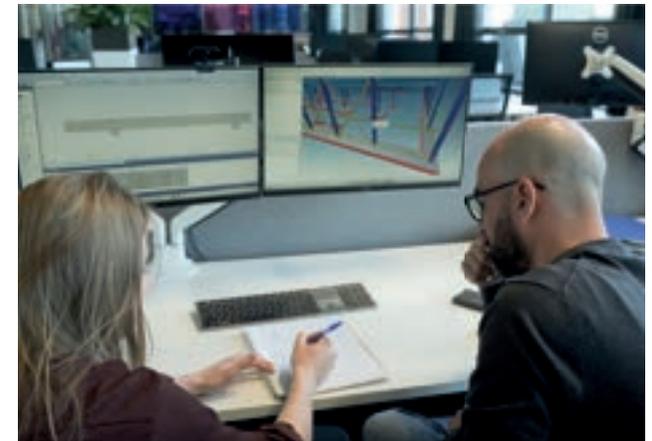

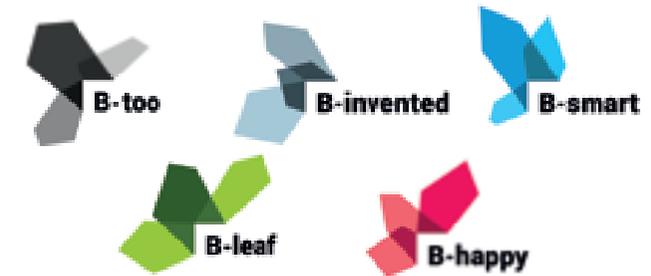

B-smart fundering realizes the complete substructure: from piling to the ground floor. The necessary structural and constructive engineering

is provided by our sister company B-invented. They combine their knowledge with the experiences of our permanent implementation teams. To optimize the process, we have developed products that make this possible, such as the B-smart and B-smart S-elements and various prefab system components. Smart in the basics.

Since we are very conscious of our impact on current and future society, in 2023 we introduced our newest B-group member, B-leaf. As B-smart, B-leaf realizes complete substructures however their choice of material differs. B-leaf's main materials are wooden construction systems.

B-happy takes care of the architecture, engineering and realization for all types of construction: from industrial buildings and logistics complexes to offices, apartments and homes. We mainly work for professional clients. In addition, we develop innovative visions such as exclusive villas, vertical neighborhoods and visions for primary care centers and customized care homes. The construction is the proof. Finally, B-too focuses on architecture, interior design of private interiors and business interiors and villa's.

# BiermanHenket

architectuur | interieur | restauratie | techniek

We specialize in the restoration, transformation, and expansion of existing, often historic, buildings. We also create new buildings that seamlessly integrate into the city and neighborhood. We strive to create surprising buildings and interiors where people can move freely and foster connection. With a sense of history, we build on the layered city. We strive for high-quality architecture that seamlessly adapts to different uses while also allowing room for change.

BiermanHenket enjoys working on projects both large and small: from urban development plans and buildings to interior design. Every project is unique and begins with intensive consultation and an analysis of the requirements and wishes. If desired, we create a program of requirements. We analyze the history and values of the location. The design is developed in phases to arrive at optimally supported choices in collaboration with stakeholders. Three-dimensional BIM models are used from the very beginning of the design process. This essentially creates a digital prototype of the building. This increases insight for all involved, allowing you to better envision the expected result.

## Contact person

Jeroen Evers

+31 70 7852944

Jeroen@breedid.nl

www.breedid.nl

linkedin.com/company/breed-integrated-design

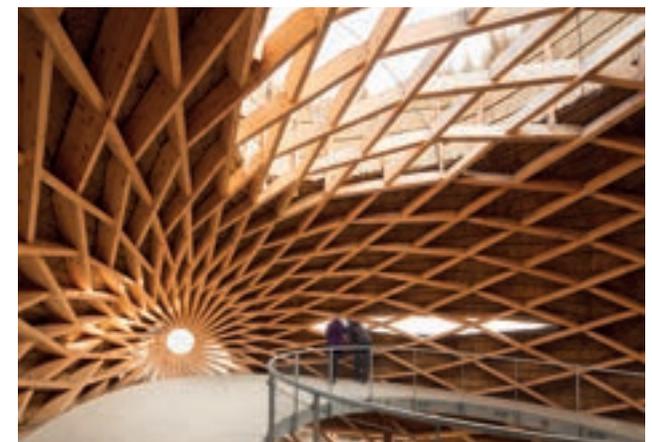

At BREED Integrated Design, we have a passion for the role that structure plays within the architecture. Structural design is shaped by the laws of physics, but it also needs to be crafted according to the spatial experience of the users. Through scale, rhythm, and materiality, a structure can enrich space, becoming an essential design instrument. We aim to be involved in the design process at an early stage, offering structural alternatives and collaborating with the architect and other design team members to achieve the optimal result.

BREED Integrated Design was founded in 2006 by Gilbert van der Lee, the first student at TU/e to graduate with master's degrees in both Architecture and Structural Design. Today, BREED ID works on high-profile projects in the Netherlands and abroad. The projects vary in scale and type: from artworks to high-rise buildings, from villas and monkey residences to (non-) residential buildings and bridges. One project we are particularly proud of is TIJ, a bird observatory designed in collaboration with RO&AD, RAU and Geometria. Shaped like an egg, the structure was developed using parametric design to carefully balance architectural ambition with structural requirements. The load-bearing system is based on a Zollinger structure,

enabling large, double-curved timber spans. This historic construction method has been reintroduced via digital design and automation. Thanks to its modularity, reusability, material choices and contribution to the surrounding ecosystem, the project is almost entirely circular and highly sustainable. Another highlight is the Marga Klompé Building at Tilburg University, designed with Powerhouse Company. The building includes an auditorium, 13 lecture halls and study spaces for 1,000 students. The structural design is all about applying the right material at the right position. The result is a balancing act between steel trusses, timber beams and columns and a concrete core. It won the Architectenweb School of the Year, Cobouw Sustainability award and the Archello University Building of the Year.

We are a small firm with very challenging projects. If you like to develop further as an all-round structural engineer / integral structural designer / table football player, visit our stand at the TU/e Bouwkunde Bedrijvendagen!

At Cauberg Huygen, everything revolves around people. Around the environment in which we live, work, and coexist, and the way in which we improve it. We believe that every issue, no matter how complex, starts with listening carefully: to you, to society, and to the environment.

We see opportunities and go for them wholeheartedly. We are working towards a future in which sustainability is a given. Whether it concerns comfortable living and working spaces, environmental issues, or making neighborhoods more sustainable, together we seek solutions that make a real difference. With a personal approach and a broad vision, we provide advice that works not only on paper but also in everyday life.

Our strength lies in our people. Cauberg Huygen's consultants are experts in the fields of building physics, sustainable development, and environmental issues. In close-knit core teams, we combine that expertise to translate complex challenges into clear and achievable solutions. In this way, we contribute to a safe and comfortable living environment.

At Cauberg Huygen, we work together to bring about change that works. We want our clients to have confidence in

our solutions and to experience how they directly contribute to their goals. That sense of connection, with each other and with the future, is what drives us. Together, we make a difference. Together, we ensure that change is not only visible, but also tangible.

Our fields of expertise are:

- Building physics
- Acoustics
- Sustainability
- Fire safety
- Moisture and mold in buildings
- Vibration analysis

At Cauberg Huygen, everything revolves around people. Around the environment in which we live, work, and coexist, and the way in which we improve it. We believe that every issue, no matter how complex, starts with listening carefully: to you, to society, and to the environment.

We see opportunities and go for them wholeheartedly. We are working towards a future in which sustainability is a given. Whether it concerns comfortable living and working spaces, environmental issues, or making neighborhoods more sustainable, together we seek solutions that make a real difference. With a personal approach and a broad vision, we provide advice that works not only on paper but also in everyday life.

# COUNT & COOPER

## BUILDING NEW WAYS

Count & Cooper works at the heart of complex construction and infrastructure projects in the Netherlands, such as major roads, energy infrastructure, water safety projects, and large urban developments. These projects are technically challenging, involve many stakeholders, and carry significant risks. Count & Cooper's role is to ensure that these projects are well managed, coordinated, and successfully delivered.

Rather than operating as a traditional contractor or engineering consultancy, Count & Cooper acts as a management and integration partner. The company positions itself between clients, contractors, designers, and specialists, aligning technical decisions with planning, costs, risks, and collaboration. This role is crucial in large projects where multiple disciplines including civil, structural, and energy engineering must work together effectively.

This means being close to the core of project decision making. Count & Cooper is involved early in tenders and remains active throughout execution, applying advanced project management methods such as 3D and 5D modelling, risk management, and systems thinking. The focus is

not only on technical quality, but also on predictability, cooperation, and reducing failure costs.

By combining technical insight with strong organizational skills, Count & Cooper contributes to projects with real societal impact, from safe infrastructure and flood protection to the energy transition. For students who want to bridge engineering, management, and real world impact, Count & Cooper offers a challenging and dynamic professional environment.

Bouwtechnisch Ingenieursbureau

Croes Bouwtechnisch ingenieursbureau is a multidisciplinary building engineering firm based in Nijmegen with a history of more than 70 years of delivering thoughtful, high-quality building solutions. We support projects from early design all the way through to completion across architecture, building technics engineering, and structural design. Our team works on assignments ranging from residential and utility buildings to complex restorations and large-scale transformations, combining technical insight with creative problem solving.

At Croes, integrated design and collaboration are at the core of what we do. Our architecture, construction, and building technics engineering experts work together under one roof to ensure projects are cohesive, sustainable, and well-executed. We use modern 3D-BIM modeling and up-to-date technical methods to add real value for our clients and streamline project delivery.

We are a family-owned business with deep roots in Nijmegen and a culture built on openness, mutual respect, and shared ownership of outcomes. Our organisational structure is flat and informal, you will work closely with experienced engineers, architects, and consultants, and your input is genuinely valued.

Croes prides itself on being a supportive and enjoyable place to work. We invest in the professional growth and wellbeing of our team, offering room for ideas, learning, and initiative. As students transitioning into professional roles, this makes Croes an excellent environment to develop your skills, contribute to real projects, and build meaningful professional experience.

At DVP, we create buildings that do more than just function, they inspire, motivate, and connect.

We are the independent partner that fully supports clients in developing and delivering utility and residential projects. With our expertise, experience, and capacity, we ensure projects are not only technically excellent but also financially sound and sustainable.

How do we make it happen?

Through a realistic and solution-driven approach in real estate consulting, project management, site supervision, and quality control. Thanks to the wide range of specialists within Diepenhorst de Vos en Partners, from cost management and installation consulting to BIM management and housing strategy, we guarantee an integrated approach that works.

For us, it's not just about knowledge and experience, it's about true commitment. Whether it's a short assignment or a complex, long-term project, we're always ready with expert, practical advice and a strong focus on collaboration between all parties involved.

Our goal? A sustainable, inspiring building delivered within budget, with the best price-quality ratio.

Curious about how we do it? Want to work on projects that truly make an impact? Meet us at the Career Market and explore your opportunities for an internship, graduation project, or starter position at DVP. Let's build the future together!

werk@draaijerparkers.nl

www.draaijerparkers.nl

linkedin.com/company/35923

Draaijer and LSA are part of Draaijer Heyday, a group of organizations to guide organizations through the entire lifecycle of their working environment. From strategic advice and design to operation and daily service provision.

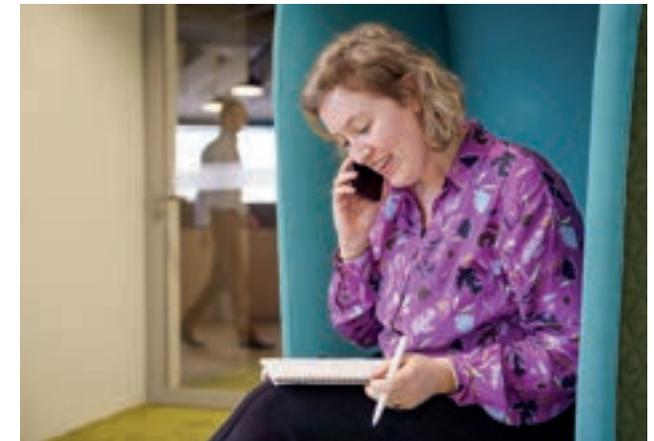

Draaijer is strategic partner in the field of smart and healthy housing. Draaijer believes in office buildings that encourage meetings and cooperation, in healthcare environments that contribute to faster patient recovery, and in schools that lead to better student and teacher performance. We think about the future by building circular and energy-conscious and taking into account the impact on the environment. We do this in an integrated way and use technological innovations, thereby fulfilling the ambitions of our clients.

LSA is specialist in the field of organization-oriented housing. This means that we pay attention to the organization itself, the people who work there and their environment. Things that are constantly changing. Housing rarely matches up seamlessly at all times with what the organization does or with what the people in an organization need. Our task is to supervise that process and to ensure that it all works out the way our clients want it to.

The team of Draaijer and LSA consists experts in various fields, with three core activities linked to the real estate life cycle: strategic advice, project-/processmanagement en (strategic) operational advice. The combination of these fields of expertise makes us a dynamic team with a considerable amount of experience and knowledge. We look at housing issues from different (integral) perspectives and know how to find an answer to every problem.

Are you looking for an inspiring working environment that gives you energy and enables you to get the best out of yourself? Draaijer and LSA grow continuously, which is why we have various challenging vacancies. Also we regularly work with (graduation) interns. We give young talent a broad insight into the various possibilities within the world of construction and real estate. We enjoy working together in an open and innovative atmosphere. Freedom and responsibility are on top of our agenda. We pay active attention to your personal and professional development.

At Goudstikker-de Vries we offer you a working environment in which you can excel. We are an ambitious team, with a treasure of knowledge about engineering. Knowledge that we are happy to pass on to you. Whether you work as a consultant, constructor or BIM-specialist, your knowledge and experience contribute to achieving the best possible result. We go to great lengths to understand our customer's wishes. A collaboration always starts with the design in mind. Together we create value by offering constructive and architectural solutions. Our 'architectural heart' beats faster when it comes to constructive challenges or complex works in difficult locations. The requirements we set for our work require certain competencies that we are looking for in new colleagues.

What you deliver will soon be visible in a city, village or residential area. Not just for yourself, but for everyone. Users, residents or passers-by, everyone looks at beautiful buildings and creative constructions with admiration and respect, right? At Goudstikker-de Vries you get the chance to participate in this. This only makes our work more fun and interesting. Working at Goudstikker-de Vries means challenging work, good career opportunities and excellent employment conditions. With us you become part of a team of

professionals and within this we value every individual. We create an environment that ensures that you can enjoy your work every day and achieve your personal goals.

If regular working from home suits you better because of the travel time, then that is possible. Just like using parental leave because you have or will have a busy family life. We are happy to think along with you about the employment contract that best suits your current stage of life. We are involved with each other.

Our lively staff association organizes fun activities and anniversaries and of course keeps all important events in its sights. Think for example of birthdays, moving house, weddings or the birth of a baby. Personal milestones deserve extra attention and should be celebrated.

From day one, we offer you plenty of room for your development within Goudstikker-de Vries, where you will receive excellent guidance. We pay a lot of attention to the development and training of our employees in order to continue to guarantee the quality of our work. We work on this through a training, course or education. This makes it possible to continuously immerse yourself in your field, to

develop yourself and to work on your career opportunities. Regardless of your knowledge or experience level.

With our Young-Professionals Program we offer an additional internal training program through informative lunch lectures, sharing knowledge and experiences or visiting a construction site. Together we discover what you are good at and what you like to do. A long-term and pleasant working relationship is created by letting you do the work that suits you best.

If you would like some more information or want to have a little chat please contact us!

ICSadvisers – Inspired housing consultants since 1955

“Children – and not bricks – should be the starting point of every building process”. About 70 years ago, there was a strong increase of population in the Netherlands. At that time, the number of schools seemed to matter more than the quality of the learning environment. School supervisors from the Ministry of Education and private school boards came together to discuss the situation. Their idea was that a well-defined educational vision would result in learning environments that enhanced the quality of education and the well-being of teachers, students and community. This led to the founding of ICS: “Information Centre for Schoolbuilding”.

Since then, the Netherlands has made great progress in the development of innovative learning environments. Nowadays, we help our clients to realise their educational vision by providing advice and assistance at every stage of the building process. The result: a healthy, sustainable, flexible, efficient and inspiring learning environment.

We provide advice and assistance in:

- Strategic Consultancy (scenario analyses, campus development, business cases, feasibility studies, location studies, master/housing plans, creating partnerships).
- Linking Education & Architecture Co-creation (workshops, websites), study trips, functional analyses and functional design, design reviews, business plans).
- Project Management (selection of architects/contractors, tenders, real estate strategies).

Our consultants are experts in linking education and architecture. The backgrounds of our consultants lie in: architecture, business development, change management, education, engineering, financial management, project management, public administration and urban planning.”

Werkplaats

Everyone has the right to a healthy and pleasant life. A good home and a liveable environment are essential to this, yet unfortunately they are still far from accessible to everyone. That is why we are committed to equal opportunities in a society that is both ecologically responsible and socially just.

We do this through innovative housing concepts for those who are in need of support and/or depended on additional (health)care, the design of sustainable homes with low costs of living, and constructing and renovating without the harmful emissions. From an ecocentric perspective, we promote the well-being and health of all residents.

We work on multifaceted, integrated plans that provide access to good and healthy living, work environments and communities, for today's residents and the future generations.

The ambition is high, and achievable by bringing together social, physical, and economic change. We build bridges between professionals and residents by approaching seemingly complex challenges as a single, shared task. We bring together architecture and urban design, data- and housing market research, participation, process management, and advisory services – for a positive change, realised together.

Kragten is an consultancy, design, and engineering firm with strong roots in the Netherlands and offices in Roermond (Herten) and 's-Hertogenbosch (Rosmalen). We are passionate about creating meaningful space—whether in cities or rural areas—through integrative, sustainable, and user-centred solutions.

At Kragten, we believe that the quality of the built and natural environment influences everyday life. That's why we work on diverse projects that span urban and landscape design, civil engineering, spatial planning, mobility plans, geographical information systems and environmental consultancy—always combining technical expertise with a broad understanding of societal needs. Our approach is integral and multidisciplinary, drawing on in-house specialists across fields so we can tackle complex challenges from multiple angles.

We collaborate with public and private clients—including provinces, municipalities, water boards, developers, recreational parties and knowledge institutions—to deliver well-informed, high-impact solutions that improve functionality, sustainability, and quality of life. Whether it's reimagining public space, guiding infrastructure

improvements, or supporting data-driven decision-making, Kragten brings clarity and creativity to every stage of a project.

What sets us apart:

- Integral design thinking: We combine technical knowledge with spatial vision and strategic insight to create cohesive outcomes that work for people and the environment.

- Sustainability focus: We contribute to climate adaptation, biodiversity, energy transition, and circular economy goals in all that we do.

- Collaborative culture: With a relatively flat organisation and close teamwork, we challenge each other to look beyond single disciplines and generate innovative and resilient designs.

For students interested in urban design, civil engineering, urban planning, mobility or environmental design, Kragten offers a vibrant environment where technical excellence meets real world impact.

KWK Huisvestingsregisseurs is a dynamic, independent consultant agency with integrated services for realisation, design, renovation and maintenance of real estate.

At KWK, we are all 'huisvestingsregisseurs' (housing directors). Because the core of our work is always the same: we unburden by taking control of the process.

For each relationship and for each question, the interpretation of that role is always different. We work closely as a team, learning from one another and leveraging our varied expertise. Each member has unique strengths—some specialise in housing advice, others excel in project management—so we know exactly whom to approach for support on different projects.

Take a look at <https://kwkbv.nl/over-ons/> to meet the KWK employees!

KWK has a focus within its services on social real estate and we are active on projects within the fields of education, security, government and healthcare & living. Take a look at our website to find out more about the projects we work on: <https://kwkbv.nl/projecten/>

We currently employ around 30 people, with offices in Rotterdam, Breda and soon in Amsterdam. Our ambition is to grow to 40-50

employees in the coming years. We are therefore always looking for new talent! Would you like to strengthen our team with your knowledge? And be of substantial importance to projects where you have many development opportunities and independence? Where your colleagues are also your coach? Then we look forward to get in touch with you!

Besides growth in employees, our ambition is always to keep growing in projects within social real estate. At KWK, we have a clear vision of how we want to take our projects forward. Users of buildings and their work, behavior and culture are key in this.

We value knowledge sharing and personal development. That's why we started KWK Academy, a quarterly session focused on a work-related topic. Sessions are led by knowledgeable colleagues or, occasionally, external experts.

Alongside knowledge sessions and personal development, we enjoy activities like playing pool, cycling through Rotterdam past our projects, team-building outings e.g. at Adventure Valley, and our annual Christmas dinner with partners. We value relaxation just as much as hard work.

Laride. Real estate that matters. For society and for you. Laride develops and manages social real estate that makes a real difference. From residential projects that contribute to liveability and wellbeing, to schools where learning takes place, and healthcare environments where people rely on one another. Buildings that are used every day and where social functions come together. This calls for attention, craftsmanship and professional expertise. That is exactly where our strength lies.

Diversity in projects and clients We work for a broad range of clients, including municipalities, housing associations, educational institutions and healthcare organisations. Every project has its own dynamics, interests and users. This diversity makes working at Laride both challenging and varied. You gain experience across different sectors and learn how technology, organisation and social impact come together in a single real estate challenge.

From strategy to delivery Laride connects strategic advisory services, development, project management and real estate management. We support projects from the initial question through to realisation and long-term use. We

do this in close cooperation with our clients and with partners from our extensive regional network. We know the region, understand where value is created and use that knowledge purposefully to move projects forward.

Learning within a strong team At Laride, you work alongside colleagues with extensive knowledge and experience, who actively want to share what they know. Our team brings together a wide range of backgrounds and areas of expertise. We collaborate closely, think along with one another and take shared responsibility for results. The atmosphere is open and professional, with a strong focus on content, personal development, knowledge exchange and teamwork.

Room to grow As a young professional, Laride offers you the opportunity to gain a broad perspective and shape your own direction. You learn how your engineering knowledge adds value to complex social challenges and how to translate that knowledge into feasible, sustainable solutions.

At Laride, you build not only social real estate, but also yourself: your experience, your expertise and a network that supports your future career.

LBP|SIGHT is a consultancy and engineering firm specialising in built environment, spatial planning and environment, based in Nieuwegein.

### Our mission

A safe, healthy, and sustainable living environment for everyone? We believe it is possible. As a multidisciplinary consultancy and engineering firm, we combine our expertise in construction, spatial planning, and environmental matters—across urban, rural, and industrial areas, and in relation to laws, regulations, and user needs.

### What do we do?

Our team of over one hundred colleagues is engaged in calculations, measurements, research, negotiations, inspections, management, and valuations. In short, we do everything to advise and support our clients in the fields of construction, spatial planning, and the environment. Our areas of expertise: Building acoustics, Building physics, Fire safety, Sustainability, Energy, Area development, Noise and vibrations, Environment, Land management, Spatial planning  
Sustainability

We help our clients create more energy-efficient and environmentally conscious living and working environments. We also strive to minimise our own impact on people and the environment, through our environmental management system and our CSR objectives. Further-

more, our office meals are vegetarian, we travel as sustainably as possible, and we enhance biodiversity on our own rooftop terrace!

### Working at LBP|SIGHT

We rely on people who bring a fresh perspective to our company and fields of expertise. That's why we regularly seek interns, graduates, and junior colleagues. What can you expect?

**Professional development:** At LBP|SIGHT, we believe everyone can make a difference. That's why we offer a tailored development path, focused on both professional and personal growth. Think of training through LBP|BRIGHT, participation in knowledge days, trade fairs, and conferences, and opportunities for part-time study or courses.

**Informal working atmosphere:** We value a positive working environment. You'll work closely with colleagues from other departments, and communication lines are short. We also regularly organise fun activities with colleagues, from cycling to concert visits, winter sports, and weekend trips.

**Good guidance:** With us, you are assured of appropriate support. As a junior colleague, you'll be assigned a mentor. You'll also automatically become a member of JONG LBP|SIGHT, which connects young colleagues through both formal and informal activities.

Mei architects and planners realizes leading projects at home and abroad. Our work is based on respect for the environment: the history of the location, the current context, and the future living environment. Drawing on our expertise in repurposing, new construction, and urban development strategies, we create user-centric designs.

## Core values

Our distinctive buildings have their own unique story, which increases engagement with the building and fosters a sense of connection among users. With creativity, expertise, and courage, we introduce innovative technical applications and usage concepts that contribute to social and ecological sustainability.

Mobius Consult is a small, specialized consulting firm based in Delft and Driebergen, dedicated to creating safe, healthy, and sustainable buildings. We advise on building physics, acoustics, fire safety, sustainable design, and building services engineering for projects such as offices, healthcare facilities, housing, and schools. Mobius supports clients throughout new construction, renovation, and transformation projects with practical, well-founded integral advice.

What sets Mobius apart is its human-centered approach. The company doesn't just focus on technical solutions, but also on the people who use the buildings and the partners they collaborate with.

As a small company, Mobius offers unique advantages for students and young professionals. There are no traditional managers; everyone in the team comes from a practical, hands-on background. This means you work directly with experienced professionals, learn from real projects, and are trusted with responsibility from day one. The informal atmosphere, short communication lines, and strong mentorship make Mobius an ideal place to learn, grow, and make a real impact.

At Movares, we do things differently. We work on smart solutions that make life easier, without you even realizing it. Faster, more sustainable, and more digital, for now and tomorrow!

Leading the next generation infrastructure

The Netherlands faces major societal and spatial planning challenges such as climate change, urbanization, and the energy transition. These challenges affect us all and demand a completely different approach. If we continue doing things the way we do, we won't be ready for tomorrow. We have to be smarter, faster, more sustainable, and more effective. We work on future-oriented solutions for issues in planning and conditioning, energy, infrastructure and water, rail, and buildings. Sustainable solutions that shape the world of today and tomorrow: we are leading the next generation of infrastructure.

nebest-adviesgroep/

Nebest is an independent engineering firm specialising in technical research, inspection and engineering advice for existing structures and infrastructure. We support clients by analysing the condition and performance of assets and translating field data, measurements and observations into clear engineering insights that inform maintenance, renovation and safety decisions.

Our specialists are involved in the inspection, testing and evaluation of bridges, roads, tunnels, buildings and industrial structures. By combining measurements, monitoring data and engineering expertise, Nebest provides reliable insights that support maintenance strategies, renovation decisions and risk management. Key themes in our work include structural safety, durability, sustainability and life-extension of assets.

For students, Nebest offers an environment where theory meets practice. You will work alongside experienced engineers, inspectors and researchers, and gain insight into real-world engineering challenges. There is room to grow, ask questions and take responsibility early on, whether through internships, graduation projects or a first job.

# ochtend mensen

We are OchtendMensen. OchtendMensen is the community of young professionals within TwynstraGudde. We believe today's and tomorrow's societal challenges demand a new kind of leadership of leaders who connect, act decisively, and are deeply engaged in society. That's why we combine impactful projects with an intensive three-year work-and-learning programme.

As an OchtendMens, you work four days a week to create a positive impact within the major societal themes of today and the future: Living environment, Climate & Sustainability, Health & Care, Governance & Society and Education. On Fridays, you focus on development: training in advisory skills, project management, and personal leadership, while co-running OchtendMensen with your peers.

Our work addresses urgent themes like future-proof cities, vital rural areas, and engaged communities. We feel a strong responsibility to tackle challenges in housing, nature, biodiversity, and accessibility. With energy and commitment, we deliver integrated solutions that shape a resilient physical environment for the future.

What sets us apart is our fresh, sharp perspective and ability to navigate complex realities. We connect knowledge, interests, and stakeholders to make an impact through our expertise in project and stakeholder management and transition strategies. Leveraging TwynstraGudde's knowledge and our own talents, we create tangible results while developing ourselves and the world around us.

Curious? Learn more about OchtendMensen and the projects we work on at [www.ochtendmensen.nl](http://www.ochtendmensen.nl), or come meet us at the Bouwkunde Bedrijven Dagen.

Palte is a dynamic, family-owned advisory and engineering firm for the construction industry in the broadest sense of the word. We combine the capability to deliver large and complex projects with the personal atmosphere and direct communication of a close-knit team.

Palte embraces technologies such as Lean management, Building Information Modeling (BIM), and supply chain integration. This trio of innovations is central to achieving higher efficiency, cost savings, and stronger collaboration between all parties involved. Our focus goes beyond technical design alone: we work on stakeholder alignment, process optimisation, and smart coordination, helping projects run smoothly from start to finish.

Within our organisation, multiple disciplines are integrated, including building engineering, structural engineering, residential and non-residential construction, civil engineering, and management. This results in a diverse portfolio of challenging projects. From infrastructure and industrial structures to complex building developments.

At Palte, you won't get lost in layers of management. You'll work closely with experienced engineers, take real responsibility, and grow quickly in a team where personal attention and ownership matter.

Republiq | WO Master | Public Real Estate | Data | Consultancy

Making impact in public real estate together

Together, we build the best and coolest real estate consulting firm of The Netherlands. We want to professionalise the real estate sector with innovative solutions.

We believe we can become game changers in the sector by using available data sources. We create the best conditions so that everyone can excel in their specific field. We believe if everybody does what they're good at, we achieve the best results. That starts by working hard and, above all, having a lot of fun.

Game changers in the sector  
A new era within the real estate industry has occurred. By using data we become game changers in the sector. Data is fundamental for every real estate-related decision. That's why Republiq consists of 50% real estate advisors and 50% data scientists. This combination makes us unique from others: figures only come to life if you know what world lies behind them.

Choose your own focus  
At Republiq we believe in mastery. We set the bar high for ourselves, our

customers and the industry. And that starts with yourself. Choose what you are good at and become the very best at it. Taste all the possibilities within Republiq, but choose your own focus.

We do not have teams or departments in which you will work. You're going to do what you like. We are confident it will be a success.

## Great Place to Work ®

We have been named Best Workplace by Great Place to Work® for 8 years now. Your future teammates rated Republiq on the themes of credibility, respect, honesty, pride and camaraderie with a 9.9! Bottom line of the research: your colleagues respect you and you can really be yourself with us. We are sure that you will soon feel at home with us.

Would you like to know more about us? Visit <https://republiq.nl/werken-bij> to get to know us even better.

We are RoosRos Architects, a firm driven by passion for architecture. Every day, our team of over sixty colleagues works tirelessly to deliver sustainable and innovative solutions in architecture. At RoosRos, we are more than just a workplace; we are a community united by a shared vision of creating meaningful, forward-thinking spaces.

Joining our team means becoming part of a professional, ambitious, and dynamic group of colleagues. We warmly welcome new talent, and we place great value on openness, collaboration, and continuous personal development. Whether you are an intern, a recent graduate, or an early-career professional, you will be a vital part of our organization, contributing to projects that have a real impact.

At RoosRos, we believe in nurturing passion. Our firm is a learning organization that thrives on innovation and teamwork to shape a healthier, more sustainable environment. Through the RoosRos Academy, we provide initiatives that support our ongoing growth in the field of architecture. We are committed to stimulating the potential and ambition of our colleagues, and we strive to bring out the best in everyone we work with.

For recent graduates, we encourage you to explore opportunities like the PEP (Professional Experience Program) as a steppingstone in your career. As part of our team, you will have the space and support to grow, explore, and refine your skills.

If you're interested in an internship, or if you've recently graduated and are looking to start your professional journey, we'd love to hear from you! Get in touch with us—we're eager to meet you and learn how you can contribute to our vision. Apply through our website and take the first step toward an inspiring and fulfilling career at RoosRos Architects.

Everyday our consultants and project managers create future-oriented solutions for living, working and learning environments together with our clients. We realise the ambitions of our clients and enable them to stay on top of the development process. Our people always aim for the best possible results, preferably taking it even one step further. In this way, we help make the real estate industry a better place, every day. We are a successful company that is contributing to high-profile buildings and areas. WTC Amsterdam, microcity "Het Platform", Forum Groningen, Werelderfgoedcentrum Waddenzee, redevelopment of V&D Eindhoven and the city hall in Utrecht are some examples of projects we are proud of!

At RYSE, we take pride in our expertise and our skills. Our dynamic organisation is founded on experienced consultants and project and process managers. We offer our employees the kind of working and learning environment that nurtures their talents and curiosity. For instance, we organise many knowledge sessions with both in-house and external experts.

**Young Talent Program**  
RYSE is always on the look-out for people who are passionate about their profession. People who get

up in the morning determined to make a difference and make our built environment more beautiful and more clever. If you join our team as a young, ambitious and enthusiastic talent you will participate in the Young Talent Program. This is a development program in which you work on broad professional knowledge, personal skills and effectiveness. You will also automatically become a member of the 'RYSING STARS' community run by and for junior project managers. RYSING STARS focuses on internal and external networking and knowledge sharing with lots of room for fun activities.

**Kickstart your career at RYSE**  
Do you want to experience for yourself what it is like to work in the dynamic world of project management and kickstart your career? We always welcome graduates, trainees and working students. Contact us for the possibilities!

At RYSE, we encourage people to excel at the individual level, but we also encourage them to become great team players.

Architecten & Constructies

SKS Group is a multidisciplinary engineering and consultancy group active within the construction sector, with offices in Roermond, Venlo, Eindhoven, Boxmeer, and Dubai. We combine architecture, structural engineering, and project consultancy in one integrated approach — from design to realization.

Together with companies such as WSM Engineering, Vander Weide Van Bragt, and Novaedes Architects & Structural Engineers, we offer clients a complete process: from concept to execution, with a focus on quality, innovation, and affordability.

Our mission is clear: building the Netherlands, building the future — with solutions that are sustainable, technically robust, and economically viable.

SKS Group is not a spectator of policy, but a builder of solutions. We think ahead, anticipate changes in the market and politics, and continue to invest in people, knowledge, and technology.

# sonneborgh.

At Sonneborgh, it's about more than just bricks and numbers. We believe that housing, care, and well-being go hand in hand. For over 25 years, we have been creating living environments with future value for residents, caregivers, and investors alike. What drives us? Creating living environments that fit the people who live and work there. This requires vision, expertise, and collaboration. We combine knowledge of the healthcare sector with years of experience in real estate development and work closely with care organizations, investors, and other partners. Transparent, involved, and with an eye for the long term. Whether it's development, investment, or construction, we deliver real estate with future value—today and for generations to come.

At Sonneborgh, all aspects of real estate and construction are present, including the financial side through real estate investments and financing, real estate development and construction, as well as guidance and aftercare. As a student, you can get acquainted with all these fields within real estate and construction. Additionally, our office is located near Eindhoven Central Station, making it extra easy to get to know our company. So be sure to stop by our stand to talk about the possibilities!

# STEVENS VAN DIJCK

## Quality and Quantity in Perfect Balance

Building is more than stacking bricks, that's our philosophy. It's about combining the right people, knowledge, skills, and materials. Our project managers and consultants ensure quality and quantity are perfectly balanced, whether for large, complex challenges or small, specialized projects. From construction management and housing advice to real estate consultancy and everything in between.

## Teamwork Drives Success

The success of any project depends on the team. That's why we invest in collaboration from day one, leveraging expertise, working hard together, adapting when needed, debating ideas, and celebrating achievements. Every role matters: a carpenter is just as essential as a manager. Our clients are part of this team too, with their question as our starting point. We guide you as leaders, critical thinkers, and committed partners, always looking beyond checklists to enhance the bigger picture. We challenge assumptions, explore solutions, and share visions to deliver the best results.

## Building Greener, Better, and More Enjoyable

Sustainable building isn't a question, it's the answer. Buildings serve people:

for living, working, and enjoying life. Of course, they must meet technical standards, but we also value social impact, future-proofing, and circularity. That's why we launched [www.beteregebouwend.nl](http://www.beteregebouwend.nl), a knowledge platform for greener, better, and more enjoyable construction, projects that align seamlessly with their purpose, with respect for people and the planet.

## Always Moving Forward

We're not a family business, but it feels like one. A small, informal team of passionate professionals who know each other and work together to deliver excellence. We encourage learning and growth because the construction sector never stands still, and neither do we. Work with us, and you'll have the freedom to shape your career. The foundation is there, the rest is yours to build. Together, we go further.

## Working at Stevens Van Dijck

We welcome professionals who share our values. Vacancies range from internships and graduate roles to senior positions. If you want to work on diverse projects and keep developing, explore your career opportunities with us.

SVP designs places where people feel at home and which support to a sustainable, healthy society. We shape environments for living, working, learning and leisure, always putting people first. From individual buildings to urban areas, residential neighbourhoods and care or learning environments, our work adds lasting value to quality of life, today and in the future.

Our practice brings together around sixty designers, working from Amersfoort on projects across the Netherlands. What sets us apart is the close collaboration between urban designers and architects. This integrated way of working ensures that our plans are coherent, realistic and resilient, at every scale.

SVP is known for its open and collaborative culture. We combine over forty years of experience with a curious, research-driven mindset and a personal approach to design. As designers, we recognise our responsibility to future generations and continuously explore circular and sustainable solutions. To us, sustainability goes beyond technical performance: it is about creating ecologically responsible, socially meaningful places that stand the test of time.

Interested in working at SVP?

SVP offers an inspiring workplace where emerging talent can grow and thrive. We are always keen to meet motivated students and young professionals who want to contribute to meaningful, real-world projects. You will have the opportunity to apply your creativity and knowledge throughout every stage of a project, from early concepts to implementation. We encourage personal development and learning through close collaboration, within an open, supportive and energetic studio culture. We would be delighted to meet you!

🌐 [www.linkedin.com/company/tauwnl/](https://www.linkedin.com/company/tauwnl/)

TAUW is a leading European consultancy and engineering firm that makes sustainability concrete and achievable. With more than 1,400 passionate professionals, we work daily on projects that contribute to a healthy, future-proof living environment. At TAUW, you have the opportunity to make an impact, on the world and on your own development.

You'll join an organization that inspires, challenges, and connects. Together, we work on solutions for complex societal issues such as climate adaptation, energy transition, digital transformation, ecology, soil quality, biodiversity, urban development, and safety. Our clients include government bodies, municipalities, provinces, and industrial companies seeking sustainable answers to pressing issues.

TAUW operates on a project-based and multidisciplinary basis. This means we bring together diverse expertise: from project managers and consultants to specialists and young talent. Sustainability, digitalization, and safety are core to our DNA. We integrate these values into all our projects and partnerships.

Our people are our greatest asset. They are knowledgeable, committed,

and enthusiastic about what they do. In an open corporate culture based on trust, collaboration, and knowledge sharing, we care for each other, our clients, and the world around us. We believe in the power of teamwork and direct communication, and we encourage personal growth and professional development.

At TAUW, you don't just work on projects—you work on your future. Your ideals, ambitions, and dreams are given space here, because TAUW is ambitious: just like you. Live YOUR Ambition.

## TEAM V ARCHITECTURE

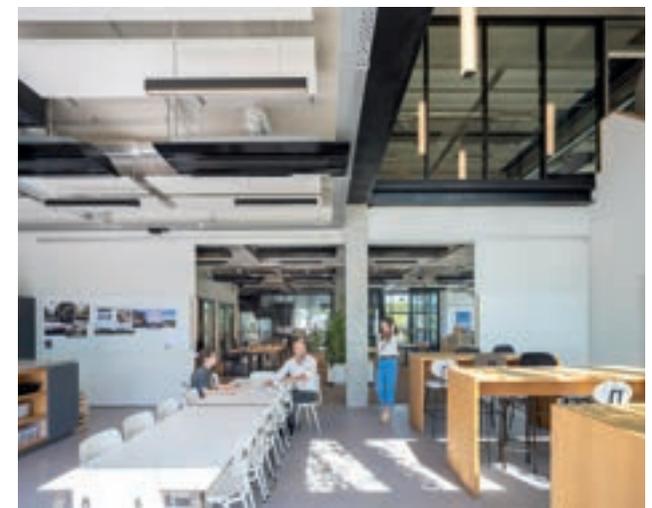

We are Team V, an architectural firm from Amsterdam, founded in 2013. Team V comprises sixty creative professionals: architects, technical designers, interior architects, urban designers, historians and modelmakers working closely together as one solid team. We have been working on a wide range of projects since 2013, including public and cultural buildings, high density housing, university buildings, private homes, public transit hubs as well as complex renovations and transformations. This allows us to cross-reference between different scales and social perspectives.

The name Team V reflects our philosophy; we are a true team. Our approach is to combine the talents of individuals in a team. We utilise the skills and expertise of each person involved from different disciplines, sharing our knowledge with our team, partners and clients. Jointly we strive for an optimal result. We carefully assess all aspects of a project, asking questions and listening carefully to transform requirements into space, form, light and materials. We take designs from a concept to reality; our technical knowledge of construction informs our initial thinking about a project.

We have a fundamental conviction that there is more than one ultimate answer: solutions are relative to circumstances and conditions. The broader the perspective and the more in-depth the understanding of the brief, the more precise and well-defined the solution.

Accordingly, ensuring a building's sustainability and usability is our ultimate goal. We don't just design; we deliver bespoke, sustainable buildings. Architecture connects and brings people together. We believe a building is not finished when it is ready to inhabit. This is when its lifecycle begins, it is ready to contribute to people, culture and society.

**Contact person**  
Wilbert Eskes

+31 6 13066652

wilbert@tentech.nl

www.tentech.nl

www.linkedin.com/company/tentech-bv

Architecture, craftsmanship, engineering. Tentech is an innovative design and engineering consultancy specialized in lightweight structures. Our architects and engineers focus on membrane structures, temporary structures, complex geometries and the use of distinctive materials. In addition to fabric, steel, wood and aluminium, Tentech explores the implementation of cardboard, (3d printable) synthetic material and bamboo.

**Lightweight construction**  
Tentech, as a design consultancy, has a unique role. We are often asked to participate in specific parts of a project, whenever a combination of modern craftsmanship and attention to detail is required. We do not necessarily reserve this expertise for lightweight structures. For example, we also use our knowledge and experience to work on industrial processes and product innovations.

**Modeling and analysis**  
Another important aspect of our service is controlling complex membrane-shapes. We possess the expertise and techniques to model and analyse tensile structures and to convert 3D complex surfaces into 2D cutting patterns. Additionally, we take care of the structural feasibility of

products. We strive for a sustainable relationship with our clients. Hence, we are committed to point out innovation opportunities and possibilities for product improvements.

**Regulations for temporary structures**  
Tentech operates worldwide. Hence, we have extensive knowledge of (inter)national laws and regulations concerning permanent and temporary structures. Started as a spin-off from the Faculty of Civil Engineering at Delft University of Technology, Tentech was founded in 1997. Our multidisciplinary team consists of architects, structural engineers, architectural technologists, industrial designers and CAD engineers on various core tasks. For example, the development department is responsible for new construction, sustainability and maintenance, whilst the housing department focuses on supporting our residents and improving livability in neighborhoods.

# TRUDO

Trudo is a social housing association based in Eindhoven. We play a vital role in providing affordable and sustainable homes across the city. We support people that need us most and work towards an inclusive society. Our mission, Supporting People- Let's Innovate, is integrated in everything we do. With a bold approach, we support individuals striving to move forward in life. This is how we make a difference for our residents and the city of Eindhoven.

Trudo focuses on more than just building homes. We are one of the driving forces behind the redevelopment of Strijp-S. In this area, in addition to housing, we also own cultural, creative, and commercial spaces, such as the Klokgebouw and Area51.

Other notable projects by Trudo that you may know are Matchbox, Haasje Over, the Trudo Toren, the redevelopment of Woensel-West, and Landgoed Eikenburg. Over the years, we have won several awards for our projects, such as the Gouden Piramide (Haasje Over), the Dirk Roosenburgprijs (ouvre award) and the Brabantse Stijlprijs (Mainelaan).

Circular & biobased  
Housing corporations face major

challenges such as inequality, climate change and the housing shortage. Guided by our mission Let's Innovate, we actively address these issues in our moonshots for 2035. This results in innovative projects where we prioritize bio-based and circular building. In this way, we aim to reduce the housing shortage whilst minimizing our impact on the planet. Currently we are building several projects using CLT and straw, including in the Rustenburgstraat and the VB-terrain.

Trudo is a network corporation that handles some of its operational activities internally whilst delegating certain activities to partners. This approach enables us to realize higher ambitions than what could typically be expected from a medium sized housing association.

Trudo has a very flat organizational structure. Our five departments (housing, development, finance, strategy & policy and staff) focus their expertise on various core tasks. For example, the development department is responsible for new construction, sustainability and maintenance, whilst the housing department focuses on supporting our residents and improving livability in neighborhoods.

# VeriCon

At VeriCon, we believe construction can be improved. As a structural engineer, you are entering a field that is rapidly shifting from traditional craftsmanship to a high-tech, data-driven industry. That transition is exactly where VeriCon operates. Through our innovative solutions, we can accelerate processes, enhance quality, and prevent significant costs resulting from failures. VeriCon has rapidly grown to become one of the largest companies for structural engineering in the Netherlands.

In today's complex construction projects, many disciplines work together at the same time. At VeriCon, you will learn how structural engineers add value within this multidisciplinary environment by combining engineering knowledge, BIM, and advanced calculation methods. Sustainability is always part of that equation, not as a buzzword, but as a design principle you will actively work with.

More and more stakeholders recognize the effectiveness of our approach, yet we haven't reached our ultimate goal. Within a few years, we aim to demonstrate that our words are not just empty promises, but tangible improvements. Every day, we work diligently and passionately toward this objective. We currently have nearly

a hundred structural engineers and 3D engineers, but we are striving to continue our growth. So, would you like to be a part of our team and embark on challenging projects?

As a student or graduate, you won't just observe. You will actively contribute to real projects, from residential buildings to high-rise structures and innovative, one-of-a-kind designs. Concrete, steel, timber: you'll work with a wide range of materials and systems. We use state-of-the-art software, and when existing tools fall short, we develop them ourselves. This makes VeriCon an ideal place to deepen your technical skills and understand how theory is applied in practice. You'll be guided by experienced structural and 3D engineers who enjoy sharing their knowledge and helping you grow, both technically and professionally.

Are you looking for an internship or your first job after TU/e? At VeriCon, you'll find challenging projects, responsibility, and room to develop your own ideas. You are always welcome at our offices in Veldhoven and Druten.

We look forward to meeting you at the Bouwkunde BedrijvenDagen and exploring what we can build together!

Voss architecture: We love to build your future!

At VA, we practise architecture as master builders and do not limit ourselves only to exterior or interior architecture or product design even.

Our passion is designing everyday spaces. We remain involved with our national and international projects and clients from the first sketch to beyond completion; interiors and exteriors of homes and offices, to entire apartment complexes and educational and healthcare institutions.

In our studio, we realise our designs together with an enthusiastic team from our office in the iconic Klokgebouw at Strijp S in Eindhoven. We are fueled by developing and realising a wide variety of design assignments, each with its own story.

VA in a nutshell:

- Serious fun
- Bold realistic
- Mainly Dutch clients
- Intelligent, creative and communicative
- A good dose of energy, guts and humour

## Talented engineers and consultants with ambition

Witteveen+Bos offers its clients value-added consultancy and top-quality designs for water, infrastructure, environment and construction projects. With a staff of more than 1.700 employees, we are part of the top ten Dutch engineering and consultancy firms. We use our high-end expertise to resolve complex issues and are a committed partner for our clients. Our vision is to offer the very highest level of quality. This means: aiming to be very good at what we do, collaborating with other top experts, and maintaining a culture of entrepreneurship and trust.

## Multidisciplinary and fascinating projects

Our multidisciplinary approach to projects is the distinctive feature of the way we work. We serve our clients from seven offices in the Netherlands and thirteen international offices. Our consultancy work includes the entire process from planning, design, engineering, preparation to supervision and project management. Projects we have been working on are for instance: Oosterweel connection in Antwerpen, Spoorzone Delft and Room for the River projects. Examples of international projects are the Masterplan in Jakarta and drinking water facilities in Africa.

## Open for talent and ambition

We attach great importance to our independence and to our corporate culture, which allows all of our employees to excel, utilise their talents to the full and maximise value for clients. Engineers and consultants working at Witteveen+Bos are continuously searching for new challenges. Together with young and enthusiastic colleagues you work in project teams. Working in project teams of varying composition increases the efficient transfer of know-how and promotes the building of good expertise and contact networks. There is plenty of room for staff initiatives by providing employees with much independence and personal responsibility in projects. Professional development opportunities are offered through in-house training and external courses and seminars.

# ZZDP

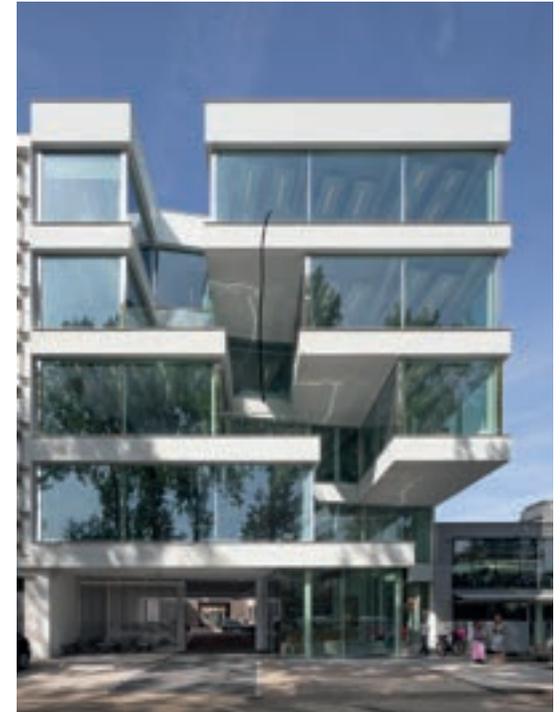

Architects & Entrepreneurs – This is ZZDP

Founded in 1954 by Piet Zanstra, ZZDP combines decades of expertise with a forward-thinking vision. We design buildings that strengthen identity, enhance environments, and deliver value. Specializing in the private sector, we work closely with developers and institutions from the earliest stages to ensure architectural quality, commercial success, and user satisfaction.

Our ambition: buildings with character—iconic, meaningful, and built to last. Our Amsterdam office, completed in 2019, reflects this philosophy: a sleek, high-end space that inspires and showcases our signature style.

ZZDP stands for architecture with lasting impact.

# Expressions of Gratitude

## *Board 2025-2026*

We would like to sincerely thank everyone who contributed to making the 25th edition of the Bouwkunde Bedrijvendagen possible. As the 24th Board, we worked with great dedication to further develop BBD and organize events that support students and companies in building connections, gaining insights, and shaping “Your Blueprint for Tomorrow”. With the conclusion of the events as of the 18th of March 2026, this anniversary edition comes to an end.

Since June 2025, we have continued the organization of the Bouwkunde Bedrijvendagen on the strong foundation laid by previous boards. We would like to thank all former boards for their contributions, with a special thanks to the 23rd Board for guiding and supporting us as our advisory board.

We are proud of the commitment and collaboration within our committees. The Business Contact Committee built and maintained strong relationships with participating companies, the Organisation Committee laid the foundation for a diverse and engaging program, and the Promotion Committee ensured strong visibility and engagement among students. Their dedication was essential to the success of this edition.

We would also like to thank our main sponsor, VeriCon, for their trust, support, and valuable contributions, which played an important role in realizing this year’s events. In addition, we are grateful to the study associations for their cooperation and involvement in organizing and promoting the Bouwkunde Bedrijvendagen.

Finally, we would like to thank all participating students, companies, sponsors, volunteers, student teams, and the Committee of Recommendation for their interest, dedication, and effort. Together, we created an edition that connected ideas with opportunities and helped shape the future.

We hope to see you again at the next edition of the Bouwkunde Bedrijvendagen.

# Broaden Your Horizons

Studying at TU/e is about more than earning your degree. It's about becoming the kind of thinker the future needs: curious, critical and open-minded.

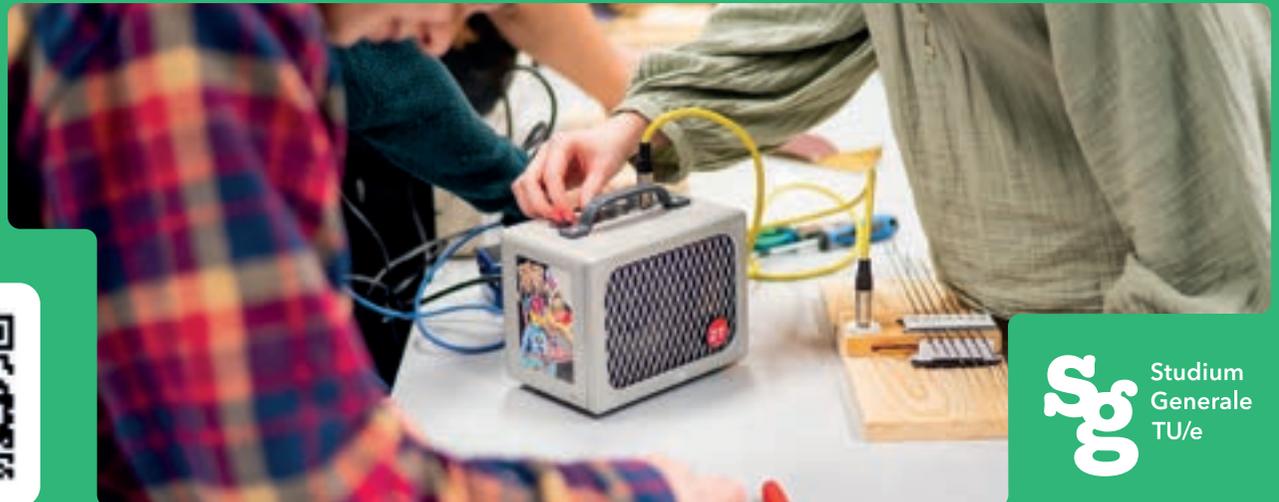

That's where **Stodium Generale (SG)** comes in. We challenge you to look beyond your textbooks and explore the bigger picture; scientifically, culturally, socially, and personally.

We organize a broad mix of lectures, debates, films, documentaries, theatre performances, concerts, exhibitions, workshops, and excursions — also together with students. Expect fresh perspectives. Lively conversations. Unexpected insights. And yes, a good dose of fun.

Most programs take place right here on campus: in De Blauwe Zaal (Auditorium), the Corona Hall (Luna building), and our on-campus cinema, Filmhuis De Zwarte Doos. Most events are free and open to students, and anyone curious enough to join.

Discover the ideas, stories, and questions that don't fit into your syllabus.

# TIME TO BUILT YOUR FUTURE

*Find and develop  
your skills!*

# VeriCon

At VeriCon, we firmly believe that the construction industry can be improved for the better, and we're committed to playing our part in achieving that goal. By prioritizing innovation and collaboration, we can transform construction from a craft to a technology-driven field. By leveraging cutting-edge solutions, we can accelerate processes, boost quality, and reduce costs associated with errors. We remain focused on sustainable practices, working towards a brighter future for all.

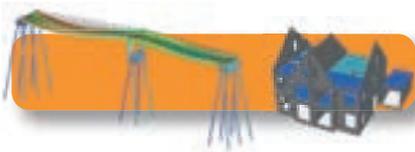

Our approach has earned us a strong reputation in the Netherlands, where we've quickly become a leading consultancy firm in the construction and real estate development industries. Our clients appreciate our results-driven methodology, and we're eager to continue raising the bar. We're not content with just talking about improvement; we're committed to demonstrating real progress.

With nearly 100 structural and 3D engineers on our team, we're constantly pushing ourselves to achieve more.

Concrete, steel or wood; ground-level residential construction, apartment or residential towers, industrial, commercial real estate, healthcare, education or civil projects, VeriCon doesn't shy away from any challenge.

We provide advice, designs, models and calculations for sustainable and economically efficient constructions.

Curious to see the results? Take a look at some of our work down below.

## Collaboration

"We combine individual strengths to achieve goals efficiently."

## Innovative

"We have the creativity, ability and will to constantly innovate."

## Ambitious

"We are driven to offer more than expected and be successful in doing so."

## Responsible

"We consider the effects of our choices on people and the environment."

Do these characteristics fit you as well? Do you want to join a team of driven professionals in your field? Are you ready to take on a challenging project? You don't have to wait until you graduate! VeriCon offers internships, graduate positions, work-study programs, and dual programs. We would be delighted to meet you and discuss the possibilities!

## What do employees say about VeriCon?

All fun and games, but what is it really like to work at VeriCon?

We have a flat organizational structure and pride ourselves on our free and independent way of working, where personal growth is highly valued. In addition, we like to make room to help you continue to challenge and develop yourself. All this to ensure that you really feel at home with us.

Read below how Wietse and Joost experience working at VeriCon!

During my graduate internship, I already had good experiences at VeriCon. For this reason, I ended up coming back after a few years, and I'm still happy about that.

I have always been ambitious. I started working at VeriCon, but also wanted to continue my education. VeriCon supported me in that. Not only by paying but also by giving me time to study. This allowed me to complete this study in one go.

The great thing about working at VeriCon is the freedom I get. I have recently been promoted to the role of team leader for the civil team, which I am very happy about. It's a great mix of client contact and structural calculations for civil projects.

We work in a close knit-team. Colleagues are willing to brainstorm when necessary and there is always room for a chat.

### Wietse, team leader civil projects

Joost, 3D-engineer

I did an internship at VeriCon because I had heard that VeriCon designs everything in 3D and strives for high-quality BIM models. In practice it turned out to go much further, the whole process is set up according to BIM. This makes it much easier to collaborate with different teams.

After graduating, I was therefore eager to return to VeriCon. Besides BIM and the challenging work, the freedom you get to develop yourself appeals to me. I learn a lot and there many opportunities for further growth. There is real collaboration here, everyone uses each other's knowledge.

My goal is to first model my own projects as lead modeler and eventually become a project leader.

### Does this sound good to you?

To fulfill our ambitions, we want to expand our team even further.

So please don't hesitate to contact us!
